PLASTIC TAGS

Toughtag is a 200 micron non-tear plastic which is clay-coated to give a very smooth matt finish which allows excellent print quality.

Easy to write on, it has very high burst strength so it often requires no reinforcement on the hole. We also stock a 350 micron Toughtag.

The material is suitable for die cutting or putting a slot in. It is water resistant and weather proof. Tags made from Toughtag can be left outside for months at a time. The base material is white and we can print 6 standard colours from stock - red, yellow, green, blue, orange and pink. Any other colour you require will be printed to order.

TYVEK TAGS

Tyvek tags are easy to write on and can be supplied in continuous form or as single labels. Ideal for outdoor use, they are chemical, water and tear resistant.

We can flood coat white Tyvek to six standard colours (red, yellow, blue, green, pink and orange). The standard weight of Tyvek is 75 gsm although we also supply 105 gsm for a small extra charge.

MANILLA TAGS

The paper manilla and pulp board tags tend to be used in industrial environments where simple print is required with stock control, examination and production.

We can print these tags in up to four colours but the majority of customers print this type of tag in one or two colours

NAMEPLATES

Nameplates are available in a wide range of metal and plastic materials ranging from aluminium, stainless steel and brass.

Aluminium material is durable and hard-wearing. It is ideal for all kinds of outdoor use as it is chemical and water resistant. We can supply this in various thicknesses to suit any application stainless steel, like aluminium, is durable and hard-wearing.

However, this material can withstand high temperatures. For example, stainless steel nameplates can be used on fire doors where information must remain intact after a fire. It can also be supplied in various sizes and thicknesses We help you choose the right material for your requirements and, as many of our materials are held in stock, we provide a fast turnaround service.

SELF-ADHESIVE LABELS

Self-adhesive labels are available in a wide range of paper, polyester, and vinyl materials. This plastic is a durable material which can be sub-surface printed to protect the print. It is also water-resistant and can be used in tough conditions where the information needs to last a long time.

These labels can be supplied in singles or continuous sheets.

We help you choose the right material and format for your requirements and, as many of our materials are held in stock, can provide fast turnaround at competitive prices.

We can print these tags in up to four colours but the majority of customers print this type of tag in one or two colours
